

Functions

Definition :

Types :

Function Calling Techniques

1 Call By Value

Original Kept As It Is

Called Function Makes its Copy & Makes Changes in that Copied Value

2 Call By Address

Original Given To Called & Allowed Changes in it

Function Types Based On Return Value & Arguments Parameters List

1. Accepts Nothing Returns Nothing

Syntax ->

```
void <FunctionName>(void);
```

Example ->

```
void Add(void);
```

2. Accepts Nothing Returns Something

Syntax ->

```
DataType <FunctionName>(void);
```

Example ->

```
int Add(void);
```

3. Accepts Something Returns Nothing

Syntax ->

```
void <FunctionName>(DT1 Arg1,DT2  
Arg2,DT3 Arg3,....,DT_N Arg_N);
```

Example ->

```
void Add(int No1, int No2);
```

4. Accepts Something Returns Something

Syntax ->

```
DataType <FunctionName>(DT1 Arg1,DT2  
Arg2,DT3 Arg3,....,DT_N Arg_N);
```

Example ->

```
int Add(int No1, int No2);
```
